Engineering Project Report

Authors	Example Student	Student ID: 202600001
	Second Student	Student ID: 202600002
Course	Research and Development Project	Course code: MECH-501
Supervisor	Example Supervisor	
Semester	Autumn 2026	
Submission date	8 October 2026	

Abstract

This example demonstrates the public structure and formatting provided by the `rdproject` class.

Preface

The report class provides project metadata, front matter, nomenclature, IEEE-style references, appendices, and project-specific running headers.

Contents

Abstract ii

Preface iii

Nomenclature v

List of Figures vi

List of Tables vii

1 Introduction 1

 1.1 Example Equation 1

 1.2 Example Figure and Table 1

A Additional Derivation 2

References 3

Nomenclature

Symbol	Description	Unit
Roman Symbols		
E	Young's modulus	Pa
Greek Symbols		
ρ	Density	kg/m ³
Abbreviations		
FEM	Finite element method	

List of Figures

1.1 Placeholder project figure. 1

List of Tables

1.1 Example material properties. 1

1 Introduction

The project follows the tensile-testing terminology of [1]. The symbol E denotes Young’s modulus and ρ denotes density.

1.1 Example Equation

A simple constitutive relation is

$$\sigma = E\varepsilon. \tag{1.1}$$

As shown in Equation (1.1), stress is proportional to strain in this idealised linear-elastic example.

1.2 Example Figure and Table

Fig. 1.1. Placeholder project figure.

Table 1.1: Example material properties.

Material	E	ρ
Example A	2.0 GPa	100 kg/m ³
Example B	3.0 GPa	120 kg/m ³

A Additional Derivation

This appendix demonstrates appendix-aware cross-references.
